| | UVSS | NO |
| | Temperature & Mask | NO |
| | Data Reporting | NO |
| | Mustering | NO |

* Alarm inputs only refer to the channels managed by security control devices, excluding the ones of network cameras and NVRs

* Stream Media Server is not supported by Virtual Machine

* The Software Upgrade Period and Software Service Period starts from the day when License is activated

License selection tool for software:

- Recommending the most suitable materials for your project [LINK](#)

Download links for software:

- HikCentral Professional v2.2.0 Client and Server Software package download [LINK](#)
- HikCentral Professional v2.2.0 Client only Software package download [LINK](#)

Software Requirements and Hardware performance

- For recommended Server and Client configuration and expected performance please refer to following document: [LINK](#)

Hikvision License Activation

- Activating/Deactivating Hikvision software license by offline mode [LINK](#)

Recommendations for cybersecurity:

- Block unauthorized computers or devices to access the local network, and forbid unauthorized connection to untrusted network on rightful computers.
- In case some services must be exposed to an untrusted network, build a Demilitarized Zone (DMZ) to add an additional layer of security to the Local Area Network (LAN), so that an external attacker only has access to the services in the DMZ, rather than any device of the LAN.
- Create VLANs to divide the network into different broadcast domains, and apply strict security strategies for important VLANs.
- Use VPN for remote access, which interconnects remote, and mostly geographically separate, networks through public communication infrastructures, such as the Internet.
- Choose proper security technologies to enhance the network safety, such as intrusion detection system (IDS), ACL (Access Control List), 802.1x, RADIUS authentication and Security Auditing.
- Adopt Domain Control on Windows Server Systems, whereby computer users are granted to have a number of necessary permissions.

Attention

To ensure the proper use of your license, please subject to the following items:

- The license can be applied to activate only one Hikvision SYS platform at a time.
- The license should be kept in a safe place. Hikvision shall not provide replacement for any loss of the license.
- The Upgrade license can only be applied on platform of standard versions (customized versions excluded)
- **NEW:** Due to the upgrade of License system, if the version of your HikCentral Professional is V1.5.0 or earlier, you need to upgrade your software or install a patch following professional instructions. Instruction(*User Manual*) and patch installation
